We enhanced and expanded Tribeca Shortlist's collection of media streaming applications.

Supporting All Roku Devices

We re-built TSL's Roku application using SceneGraph to help take advantage of the latest features of the most recent Roku SDK. The application integrates with Roku billing and offers platform specific promotions to users who want to use TSL's service

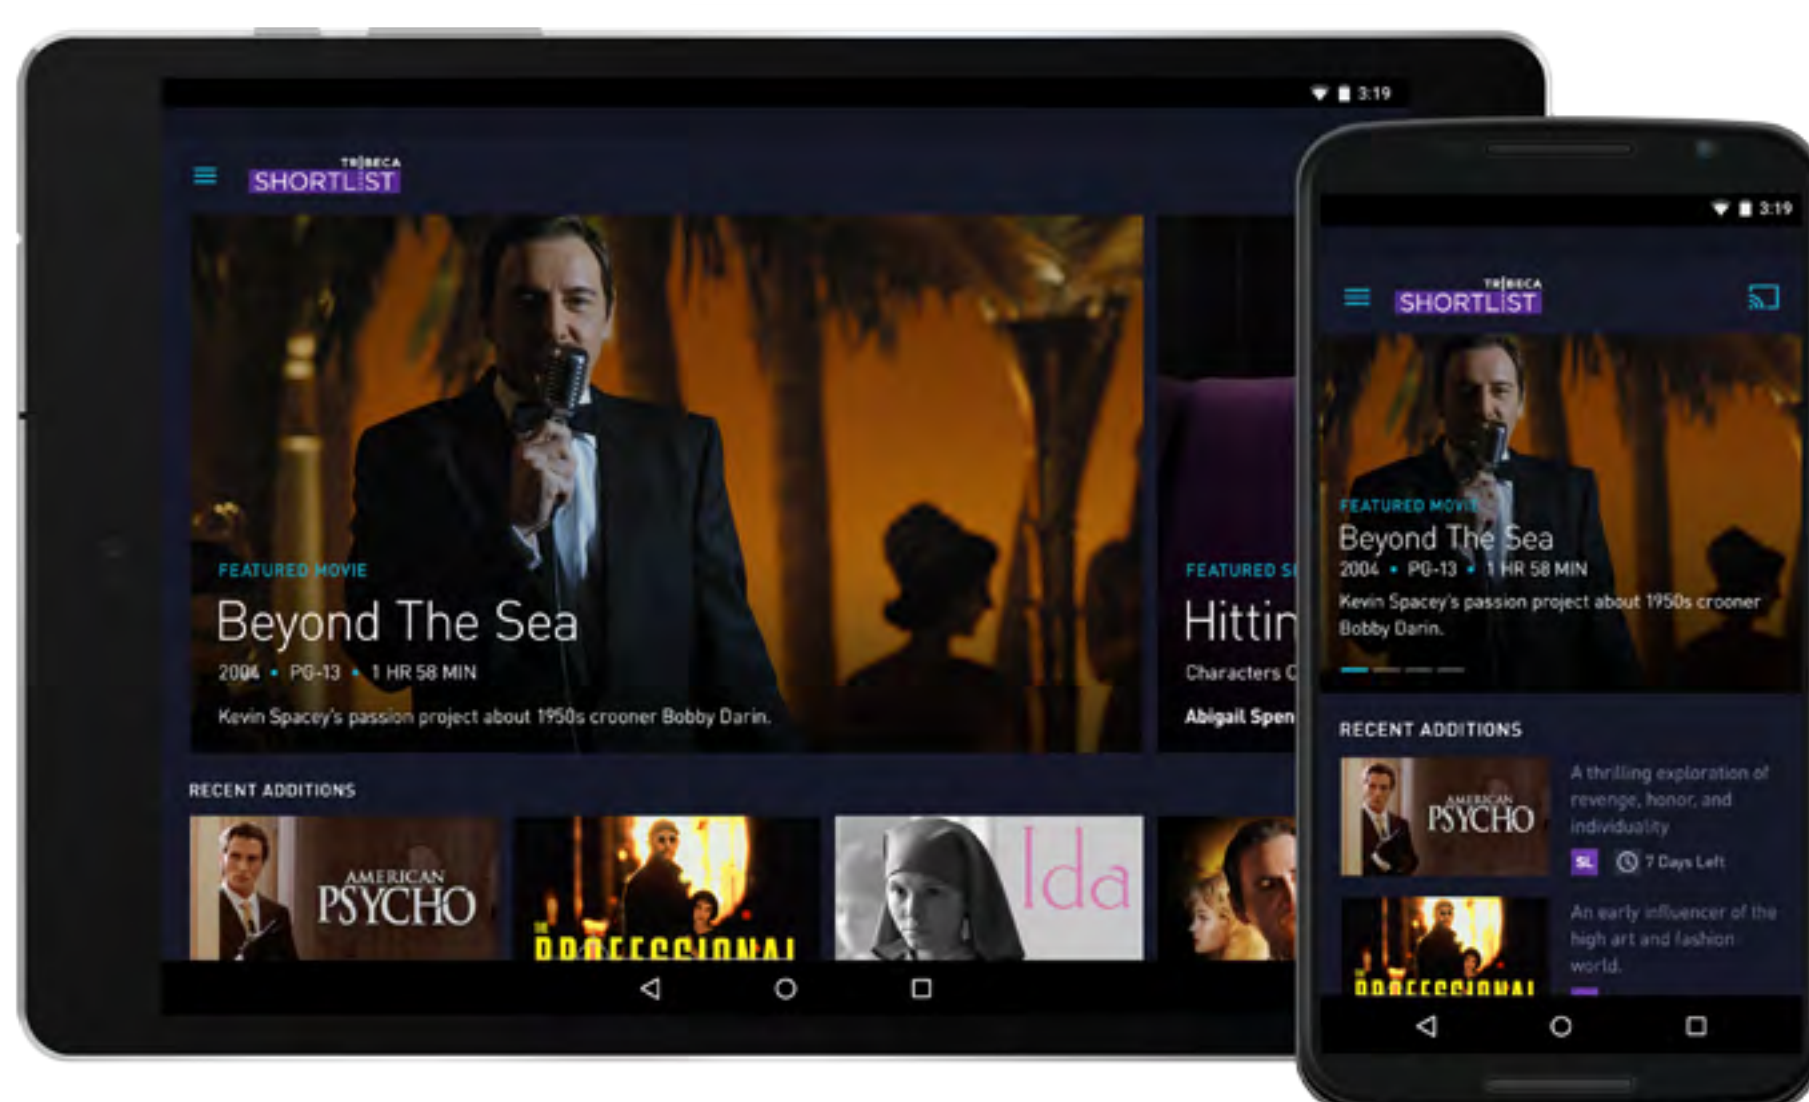

Universal Application Supporting Apple Devices

We helped TSL become one of the first applications on Apple's tvOS. We integrated with native features such as Siri, Apple Billing and the TV application to help enhance the experience.

Available on Various Platforms and Operating System

The TSL application is built to support various Smart TV brands and operating systems. We've tied in a variety of native platform specific features on the different operating systems to give the application a native feel to users.

Watch Videos Offline

Users are able to download content for offline viewing using the TSL Android application. This native application supports various Android operating systems and form factors.
